

Sacred Heart Girls' College Anaphylaxis Procedures

1. Introduction

Sacred Heart Girls' College is a school which operates with the consent of the Catholic Archbishop of Melbourne and is owned, operated and governed by Melbourne Archdiocese Catholic Schools Ltd (MACS).

2. Purpose

This procedure ensures that, as far as practicable, a safe and supportive environment is provided where students at risk of anaphylaxis are provided with reasonable adjustments to participate in school programs and activities in compliance with Ministerial Order 706.

3. Scope

This procedure applies at Sacred Heart Girls' College

This procedure applies to:

- staff, including volunteers and casual relief staff.
- all students who have been diagnosed with a medical condition that relates to allergy and the potential for anaphylactic reaction, where the school has been notified of that diagnosis, or who may require emergency treatment for anaphylactic reaction.
- the Parent (a person who has parental responsibility for a child, including a biological parent or another person who has been granted parental responsibility by a court order. The term is also used to refer to carers where permanent care, foster care or kinship arrangements are in place) of students who have been diagnosed as at risk of anaphylaxis or who may require emergency treatment for anaphylactic reaction.

4. Communication with Parents

- 4.1. The Principal engages with the Parent of students who are at risk of anaphylaxis to develop risk minimisation strategies and management strategies. The Principal will also take reasonable steps to ensure each staff member has adequate knowledge of allergies, anaphylaxis, and the school's expectations in responding to anaphylactic reaction.
- 4.2. The Principal requires that the Parent provides up to date medical information and an updated Individual Action Plan ([ASCIA Action Plan for Anaphylaxis](#)) signed by the treating medical practitioner together with:
 - a recent photo of their child and
 - any medications and auto-injectors referenced in the plan and recommended for administration.
- 4.3. The Parent is requested to provide this information:
 - annually
 - prior to camps and excursions
 - if the child has an anaphylaxis reaction at school, and
 - if the child's medical condition changes since the information was provided.
- 4.4. The Principal's nominee is to engage with the Parent where updated documentation or medication is required in line with the school's communication plan.
- 4.5. Please note the [ASCIA Travel Plan for People at Risk of Anaphylaxis](#) requires completion by a registered medical practitioner for domestic or overseas travel.

5. Individual anaphylaxis management plans (IAMP)

- 5.1. The Principal is responsible for ensuring that all students who have been diagnosed by a medical practitioner as having a medical condition that relates to allergies and the potential for anaphylactic reaction have an Individual Anaphylaxis Management Plan (IAMP) developed in consultation with the student's Parent.
- 5.2. The school requires the IAMP to be in place as soon as practicable after the student is enrolled and where possible before their first day of school. If for any reason training and a briefing has not yet occurred, an interim management plan, developed in consultation with the Parent, will be put into place for a student who is diagnosed with a medical condition that relates to allergy and the potential for anaphylactic reaction, and training must occur as soon as possible thereafter. The IAMP will comply with Ministerial Order 706 and record:
 - student allergies
 - locally relevant risk minimisation and prevention strategies
 - names of people responsible for implementing risk minimisation and prevention strategies
 - storage of medication
 - student emergency contact details
 - student ASCIA Action Plans.
- 5.3. The student's IAMP will be reviewed by the Principal or nominated staff member, in consultation with the student's Parent, in all the following circumstances:
 - annually
 - if the student's medical condition changes as it relates to allergy and the potential for anaphylactic reaction.
 - as soon as practicable after the student has an anaphylactic reaction at school.
 - when the student is to participate in an off-site activity, such as camps and excursions, or at special events conducted, organised or attended by the school (e.g. class parties, elective subjects, cultural days, fetes, incursions).

Refer to the Individual Anaphylaxis Management Plan Template in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.

Refer to the Supporting documents section for the ASCIA Action Plan for Anaphylaxis to apply for each student diagnosed by a medical practitioner as having a medical condition that relates to allergy and the potential for anaphylactic reaction

6. Location of Individual Anaphylaxis Management Plans and ASCIA Action Plans

- 6.1. Student Health Officer maintains an up-to-date register of students at risk of anaphylactic reaction as nominated by the Principal.
- 6.2. Deputy Principal – Students communicates to staff within staff briefing the details of the location of student Individual Anaphylaxis Management Plans and ASCIA Action Plans within the school, during excursions, camps and special events conducted, organised or attended by the school. Please note the [ASCIA Travel Plan for People at Risk of Anaphylaxis](#) requires completion by a registered medical practitioner for domestic or overseas travel.

Individual Anaphylaxis Management Plans and auto-injectors are located at Front Office (Student Medical files). General use auto-injectors are located in Sick Bay.

 - Procedures for camps, excursions and special activities:

Refer to Off-site Risk Management Checklist for Schools in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis Risk minimisation and prevention strategies.

Refer to Risk Minimisation Strategies for MACS schools in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.

The Principal ensures that risk minimisation and prevention strategies are in place for all relevant in-school and out-of-school settings which include (but are not limited to) the following:

- during classroom activities
- in the canteen
- during recess and lunchtime
- before and after school where supervision is provided
- special events including incursions, sports, cultural days, fetes or class parties, excursions and camps.

Our school does not ban certain types of foods (e.g., nuts) as it is not practicable to do so and is not a strategy recommended by the Department of Education (DE) or the Royal Children's Hospital as it can create complacency amongst staff and students, and it cannot eliminate the presence of all allergens.

However, the school avoids the use of nut-based products in all school activities, requests that the Parent does not send those items to school if possible and the school reinforces the rules about not sharing and not eating foods provided from home.

Principal will ensure that the canteen provider and its employees eliminate or reduce the likelihood of such allergens, can demonstrate satisfactory training in the area of food allergy and anaphylaxis and its implications for food-handling practices.

The Principal or Deputy Principal – Students regularly reviews the risk minimisation strategies outlined in Anaphylaxis Risk Minimisation strategies for our schools considering information provided by the Parent related to the risk of anaphylaxis. Refer to Anaphylaxis Risk Minimisation strategies for our school in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.

The Principal is responsible for annually completing the Annual Risk Management Checklist for Schools to ensure that compliance with Ministerial Order 706 is maintained. Refer to Annual Anaphylaxis Risk Management Checklist for Schools in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.

7. Register of students at risk of anaphylactic reactions

The Principal nominates the Student Health Officer to maintain an up-to-date register of students at risk of anaphylactic reaction. This information is to be shared with all staff and accessible to all staff in an emergency.

Visual list of students with anaphylaxis on SIMON Knowledge Banks/Wellbeing for Learning and via SIMON Medical Dashboard/Medical Categories.

8. Location, storage and accessibility of autoinjectors

It is the responsibility of the Principal to purchase auto-injectors for the school for general use and to ensure they are replaced at time of use or expiry; whichever is first. Expiry date period is usually within 12–18 months. General use auto-injectors are used as a back-up to auto-injectors that are provided for individual students by the Parent in case there is a need for an auto-injector for another student who has not previously been diagnosed at risk of anaphylaxis.

The school provides auto-injector to purchase for general use. The number of general use auto injectors is determined by the number of students diagnosed with anaphylaxis and frequency of excursions and other outings/number of students attending same. This is in line with Department of Education Guidelines

The auto-injectors are stored in Sick Bay:

- Adrenaline autoinjector devices be stored in a cool dark place at room temperature, which they define as between 15 and 25 degrees Celsius.
- If these temperatures cannot be maintained, ASCIA recommends storing the device in an insulated wallet

School anaphylaxis supervisors are responsible for informing school staff of the location for use in the event of an emergency.

9. When to use an auto-injector for general use

The Principal ensures that auto-injectors for general use will be used under the following circumstances:

- a student's prescribed auto-injector does not work, is misplaced, misfires, has accidentally been discharged, is out of date or has already been used
- a student previously diagnosed with a mild or moderate allergy who was not prescribed an adrenaline injector has their first episode of anaphylaxis
- when instructed by a medical officer after calling 000
- first time reaction to be treated with adrenaline before calling

- 9.1. *Note: if in doubt, give student auto-injector as per ASCIA Action Plans. Please review [ASCIA First Aid Plan for Anaphylaxis \(ORANGE\)](#) and [ASCIA Adrenaline \(Epinephrine\) Injectors for General Use](#) for further information.*

10. Emergency response to anaphylactic reaction

In an emergency anaphylaxis situation, the student's ASCIA Action Plan, the school's general first aid procedures, Danger → Response → Send for Help → Airway → Breathing → CPR → Defibrillation (DRSABCD), the emergency response procedures in this policy and [ASCIA First Aid Plan for Anaphylaxis](#) must be followed.

The Principal must ensure that when a student at risk of an anaphylactic reaction is under the care or supervision of the school outside normal class activities, such as in the school yard, on camps or excursions or at special events conducted, organised or attended by the school, there are sufficient staff present who have been trained in accordance with Ministerial Order 706.

All staff are to be familiar with the location, storage and accessibility of auto-injectors in the school, including those for general use.

The Principal must determine how appropriate communication with school staff, students and the Parent is to occur in the event of an emergency about anaphylaxis.

Copies of the [ASCIA First Aid Plan for Anaphylaxis](#) and emergency procedures are prominently displayed in the relevant places in the school, for example, Sick Bay, Food Studies classroom, canteen. Refer to Emergency Response to Anaphylactic Reaction in SIMON Knowledge Banks/Care, Safety and Wellbeing of Students/Anaphylaxis.

- A complete and up-to-date list of students identified at risk of anaphylaxis is available via SIMON/Knowledge Banks/Wellbeing for Learning and Student Wellbeing Wall in staff lounge.
- IAMPs and ASCIA action plans are located in Front Office student medical files and SIMON student profiles. Print outs are provided for off-site activities.
- In case of emergency, follow Anaphylaxis First Aid guidelines as displayed in key locations and in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.
- Auto-injectors are located in individual student medical files at Front Office and in Sick Bay (general use).
- In the event of an emergency, parents are notified via telephone and 000 called. If off-site, organising teacher also contacts the College to inform of an off-site incident.

- Refer to Emergency Response to Anaphylactic Reaction in SIMON Knowledge Bank/Policies/Care, Safety and Wellbeing of Students/Anaphylaxis.

11. Staff training

In compliance with Ministerial Order 706, it is recommended that all Victorian school staff undertake one of two accredited training options.

The Principal requires all staff to participate in training to manage an anaphylaxis incident. The training should take place as soon as practicable after a student at risk of anaphylaxis enrolls and, where possible, before the student's first day at school.

Staff undertake training to manage an anaphylaxis incident if they:

- conduct classes attended by students with a medical condition related to allergy and the potential for anaphylactic reaction
- are specifically identified and requested to do so by the Principal based on the Principal's assessment of the risk of anaphylactic reaction occurring while a student is under that staff member's care, authority or supervision.

Our school considers, where appropriate, whether casual relief teachers and volunteers should also undertake training.

Our school staff are to:

- successfully complete an approved anaphylaxis management training course in compliance with Ministerial Order 706
- participate in the school's twice yearly briefings conducted by the school's anaphylaxis supervisor or another person nominated by the Principal, who has successfully completed an approved anaphylaxis management training program in the past two years.

A range of training programs are available, and the Principal determines an appropriate anaphylaxis training strategy and implements this for staff. The Principal ensures that staff are adequately trained and that enough staff are trained in the management of anaphylaxis noting that this may change from time to time dependent on the number of students with IAMPs. Various options are adapted to suit school needs:

Option 1. All school staff complete the online *ASCIA Anaphylaxis e-training for Victorian Schools* and have their competency in using an auto-injector tested by the school Anaphylaxis Supervisor in person within 30 days of completing the course. Staff are required to complete the ACSIA online training every two years.

At the end of the online training course, participants who have passed the assessment module are issued a certificate which needs to be signed by the school anaphylaxis supervisor to indicate that the participant has demonstrated their competency in using an adrenaline autoinjector device.

School staff who complete the online training course are required to repeat that training and the adrenaline auto-injector competency assessment every two years.

The school Anaphylaxis Supervisor will have completed 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices – at no cost for Victorian Catholic schools at the [Hero HQ School Booking Portal](#) or email Hero HQ for more information: schools@herohq.com. Training in this course is current for three years.

Option 2. School staff undertake face-to-face training 22578VIC Course in First Aid Management of Anaphylaxis. Accredited for three years.

The school notes that 22578VIC Course in First Aid Management of Anaphylaxis is a face-to-face course that complies with the training requirements outlined in Ministerial Order 706. School staff who have completed this course will have met the anaphylaxis training requirements for the documented period.

The school Anaphylaxis Supervisor will have completed 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices – at no cost for Victorian Catholic schools at the [Hero HQ School Booking Portal](#) or email Hero HQ for more information: schools@herohq.com. Training in this course is current for three years.

Anaphylaxis Supervisors

Anaphylaxis supervisors play a key role in undertaking competency checks on all staff who have successfully completed the ASCIA online training course. To qualify as a school anaphylaxis supervisor, the nominated staff members need to complete an accredited short course that teaches them how to conduct a competency check on those who have completed the online training course e.g., 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices.

The Principal is to identify two staff per school or for each campus to become school anaphylaxis supervisors.

The school's anaphylaxis supervisors are: Carmel Feeney and nominated verifier team.

On 1 September 2021, the Anapen adrenaline (epinephrine) auto-injector was introduced into Australia for the treatment of anaphylaxis. Schools will need to ensure relevant staff are trained to use them.

Anaphylaxis supervisors should participate in the Anapen workshop if their school has an enrolled student with an [ASCIA Action Plan for Anaphylaxis Red Anapen](#).

Twice yearly staff briefing

The principal ensures that twice yearly anaphylaxis management briefings are conducted, with one briefing held at the start of the year. The briefing is to be conducted by the school anaphylaxis supervisor or another staff member who has successfully completed an Anaphylaxis Management Course in the previous two years. The school use the Anaphylaxis Management Briefing Template provided by the Department of Education for use in Victorian schools. A facilitator guide and presentation for briefings created by Department of Education is accessed.

The briefing includes information about the following:

- the school's legal requirements as outlined in Ministerial Order 706
- the school's anaphylaxis management policy
- causes, signs and symptoms of anaphylaxis and its treatment
- names and pictures of students at risk of anaphylaxis, details of their year level, allergens, medical condition and risk management plans including location of their medication
- relevant anaphylaxis training
- ASCIA Action Plan for Anaphylaxis and how to use an autoinjector, including practising with a trainer autoinjector
- the school's general first aid and emergency responses
- location of and access to auto-injectors that have been provided by the Parent or purchased by the school for general use.

All school staff should be briefed on a regular basis about anaphylaxis and the school's anaphylaxis management policy.

Outline here the Staff training arrangements for your school:

- Training is conducted every two years (verification) in line with MO 706 and noted below
- Briefing is conducted each semester

12. Anaphylaxis Communication Plan

The Principal is responsible for ensuring that a communication plan is developed to provide information to all school staff, students and their parent about anaphylaxis and the school's anaphylaxis management policy.

- Raising staff awareness – twice yearly briefing, induction of new staff, CRT staff (informing of how to access information); informing staff on how to access student medical information and understanding SIMON icons re same.
- Fact sheets and posters are located in various locations to raise student awareness.
- Annual communication with parents and carers along with excursion consent forms including requests to ensure school records are accurate and up to date.
- Information on how to respond to an allergic/anaphylactic reaction on or off-site (refer to twice yearly briefing)

The Principal and their nominee work with the parent to support the student's needs. The Principal develops a communication process for when new or updated medical documentation and/or medication is required as part of the annual or triggered reviews. The school staff engaged in this process are to make communication accessible and culturally appropriate:

Initial Notification

At the start of each school year, upon enrolment and/or when a plan is due to expire, the school communicates to parents informing them of the need to update their child's medical management and/or anaphylaxis action plans (which are requested to be in place by start of school year).

Follow-Up Communication

- Student Health Officers issues reminder emails to parents to ensure plans are returned. In the event of no plan being returned, a generic plan or previous year's plan is used. The importance of accurate plans and information is consistently relayed to parents via emails and consent forms to ensure all parties are informed.
- Parents are directed to ASCIA website for action plan templates.

Ongoing Communication

- Student Health Officer contacts parents in relation to plans and medication (particularly expiry date reminders).

The Principal ensures that the school staff are adequately trained by completing an approved training course:

- ASCIA e-training every two years together with associated competency checks assessed by suitably trained Anaphylaxis Supervisor who has completed 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices, or
- 22579VIC Course in First Aid Management of Anaphylaxis every three years AND
- provision of an in-house briefing for school staff at least twice per calendar year in accordance with Ministerial Order 706, with one briefing at the commencement of the school year.

The policy is publicly available and published on the school's website.

13. Definitions

Definitions of standard terms used in this Policy can be found in the [Glossary of Terms](#).

Anaphylaxis

Anaphylaxis is a severe, rapidly progressive allergic reaction that is potentially life threatening. The most common allergens in school aged children are peanuts, eggs, tree nuts (e.g., cashews), cow's milk, fish and shellfish, wheat, soy, sesame, lupin and certain insect stings (particularly bee stings).

Anaphylaxis Guidelines (Guidelines)

A resource for managing severe allergies in Victorian schools, published by the Department of Education (DE) for use by all schools in Victoria and updated from time to time.

Australasian Society of Clinical Immunology and Allergy (ASCIA)

The peak professional body of clinical immunology and allergy in Australia and New Zealand.

Autoinjector

An adrenaline autoinjector device, approved for use by the Australian Government Therapeutic Goods Administration, which can be used to administer a single pre-measured dose of adrenaline to those experiencing a severe allergic reaction (anaphylaxis).

Ministerial Order 706

Ministerial Order 706: Anaphylaxis Management in Victorian Schools which outlines legislated requirements for schools and key inclusions for their Anaphylaxis Management Policy.
